PROGRAM REPORT

Name of the Event: A Two Week Certificate Program on Electrical Vehicle

Dates: 07-11-2022 to 22-11-2022.

Resource Person: Mr. Anil kumar

Assistant Professor ME, Visakha Institute of Engineering & Technology

Email id: anilkumar123@gmail.com

Contact number: 9494979931

Name of the Coordinator: Mr K.Jagadesh

Number of students attended: 11

Venue: Online Lab, AME Department

Objective of the program:

- Electric Vehicles can play a vital role in combating climate change across the globe by helping to cut down the emissions and reducing dependence on fossil fuels.
- This article throws light on the different types of electric vehicles, environmental advantages, various initiatives of Government and the future impact of electric vehicles on employment and economy
- CEVOLVER takes a user-centric approach for optimising the development and operation of electric vehicles and uses cutting edge technologies, components and systems for achieving the ambitious targets of the call topic.
- In both cases, the project exploits opportunities of connectivity to computational capabilities of big data. Firstly, as a source of data to support defining use cases that represent typical driving patterns and functionality.

Conventional Electric vehicles Techniques

- Electric vehicles are changing transportation dramatically and this unique book merges the many disciplines that contribute research to make EV possible.

- So the reader is informed about all the underlying science and technologies driving the change.
- The main issue with ICE vehicles is fossil fuel consumption along with rising fuel prices and this causes two main problems: energy security and CO2 emission to the environment.
- According to the observatory of economic complexity at the MIT media lab, oil is the spark of life for humans and is imported from politically unstable countries
- Considering the pressure on fossil fuels and increment in the CO2 emission, EVs reduce the reliance on transportation on crude oil and reduce Greenhouse Gas Emissions (GHG) emissions.

Advanced Electric vehicles Techniques

- We predict the rise of autonomous vehicles will have a profound impact on the global car market as it enables mobility-as-a-service to become cheaper than private-car ownership.
- The report shows forecasts of autonomous passenger car miles
- Revealing how this will lead to a fundamental peak-car scenario.
- Inductive charging is devised to reduce the inconvenience of charging plugs and used for both static and dynamic conditions.
- In case when the vehicle is moving, the large coil below road surface is magnetically coupled with the coil at the bottom portion of the vehicle and power transfer takes place
- Capacitive charging is relatively novice method and not that much matured compared to inductive charging
- We appraise the key underlying technologies such as LiDAR and camera-based systems

Outcomes of the program:

- Introduction to Electric Vehicles 101 This module introduces the students to the relevance of electric vehicles
- Current demand in EV industry and opportunities of skilled EV engineers.
- Electric Vehicle Foundations In this module, students will learn the history and evolution of electric vehicles and what goes into building them.
- Students will be able to appreciate the actual impact of EVs in the world.
- Understanding the Foundations of an Electric Vehicle Here we look into what is considered as an electric vehicle, and what electric vehicles are made up of.
- This module will cover the necessary components of an electric vehicle.
- Mathematical Modelling of an electric vehicle In this module, students learn about modelling the conversion of an ICE vehicle to electric.

PROGRAM REPORT

Name of the Event: A Two Week Certificate Program on 3D Printing

Dates: 06-02-2023 to 20-02-2023

Resource Person: Mr. Arunu

Assistant Professor ME, Visakha Institute of Engineering & Technology

Email id: arun123@gmail.com

Contact number: 6304612515

Name of the Coordinator: Mr K.Jagadesh

Number of students attended: 11

Venue: Online Lab, AME Department

Objective of the program:

Students will be introduced to 3D printing and learn how to create their own print files.

Goals & Objectives: Familiarize and educate students about the components of a 3D printer, how to operate a 3D printer, preparing & making files to print and designing objects to be printed.

Topics Covered:

Conventional 3D Printer Techniques

- 3-D printing or additive manufacturing - from three-dimensional (3D) model data
- products are built on a layer-by-layer
- through a series of cross-sectional slices
- Fabricating a wide range of structures and complex geometries.
- Considered as the most common materials in the 3D printing industry
- diversity and ease of adoption to different 3D printing processes
- found in the form of thermoplastic filaments, reactive monomers, resin or powder
- Various 3D printing techniques are available for fabricating polymers and composites

- stereo lithography,
- SLS, FDM, 3D bio printing and inkjet printing.

Advanced 3D Printer Techniques

- The starting point for any 3D printing process is a 3D digital model
- Which can be created using a variety of 3D software programmes
- In industry this is 3D CAD, for Makers and Consumers there are simpler.
- More accessible programmes available
- Scanned with a 3D scanner. The model is then 'sliced' into layers, thereby converting the design into a file readable by the 3D printer.
- The material processed by the 3D printer is then layered according to the design and the
- As stated, there are a number of different types of 3D printing technologies.
- Which process different materials in different ways to create the final object?
- Functional plastics, metals.
- Ceramics and sand are, now, all routinely used for industrial prototyping and production
- Research is also being conducted for 3D printing bio materials and different types of food.
- Generally speaking though, at the entry level of the market, materials are much more limited.
- Plastic is currently the only widely used material — usually ABS or PLA, but there are a growing number of alternatives
- including Nylon. There is also a growing number of entry level machines that have been adapted for foodstuffs.
- Such as sugar and chocolate.

Outcomes of the program:

- Materials in the forms of filaments, wire, powder, paste, sheets and inks can be used for 3D printing.
- Polymers are considered as the most common materials that have been developed for fast prototyping.
- Polymers such as (ABS) and (PLA) are the most common type of polymers for 3D printing.
- The reinforcement of polymers with fibres resulted in enhancing the mechanical properties of the 3D printed composite to be used as a functional material.
- A limited selection of metal and alloys suitable for 3D printing
